bspfix

## October 14, 2017

`GoldSrc` `Half-Life: Blue Shift` `Windows` `command-line` `mapping` `tools`

bspfix is a command-line tool for converting *Half-Life: Blue Shift* maps to the normal *Half-Life* BSP format and vice versa. When Gearbox released the *Blue Shift* expansion, a change in format made *Half-Life: Blue Shift* maps incompatible with map decompilers and other tools created by modders. bspfix converts these so that they may work with modder tools again. If needed, bspfix can also convert normal *Half-Life* BSPs to the *Blue Shift* format.

To use bspfix, drag a BSP onto the executable and type y at the Command Prompt. It's recommended that you keep a backup of the original map for safekeeping.

Sample output:

```
C:\bspfix>bspfix "bshift\maps\ba_canal1.bsp"
bspfix v1.1 by tschumann
Based on bshift_swap by prearle
```

```
Blue Shift format .bsp file
Press y to convert to Half-Life format .bsp
Press n to quit
```
